

**Action Memorandum for Time-Critical Removal
of Contaminated Soil at the Clover Park Play Area
Alameda Point, Alameda, California**

The U.S. Department of Navy (Navy) has released an Action Memorandum for a time-critical removal of polycyclic aromatic hydrocarbon (PAH)-contaminated soil at the Clover Park Play Area, Alameda Point, Alameda, California. PAHs are a by-product of combustion, generated from former gas manufacturing plants located along the Oakland Inner Harbor. PAH-containing sediment near these gas manufacturing plants is believed to have been used as fill material when constructing Alameda Point. Following evaluation of data collected during environmental investigations, the Navy has determined that a need exists for immediate removal of contaminated soil at the play area, thereby preventing the potential exposure of children to the chemicals. The U.S. Environmental Protection Agency (EPA) and the California Department of Toxic Substances Control (DTSC) provide oversight of the Navy's cleanup program and agreed to the time-critical removal action.

The Navy invites the public to review the Action Memorandum and comment in writing by January 5, 2001. A copy of the Action Memorandum is located in the Alameda Point Information Repository at the main branch of Alameda Public Library and at Alameda Point. To ensure protection of the residents and the environment, the Action Memorandum complies with the requirements of the Comprehensive Environmental Response, Compensation, and Liability Act.
